The genius of this book is how easy it is to use. The authors mix narrative reviews - in outline form - of the pros and cons of categorized Web sites and search techniques, discussing the best

sites first, and combine these reviews with more than 100 graphic "screen shots" of the pages they discuss. They use an icon format to quickly inform you if the site is free, and they show you how to use free services first, pay services second, and then, if you must pay, how to pay less. Bolstered by interesting true stories on how lawyers - many new to the net - used the Web for factual and legal investigation in preparation for trial and other professional pursuits, this book provides knowledge that empowers you to make the choices you want.

Starting with a robust discussion of the Internet, various Web browsers, and search engines, the book moves on to specific, in-depth categorized coverage of hundreds of excellent Web sites, with chapters on general facts; finding people; experts and assets; public and government records; company, medical, and scientific information; law office management; sources of state, federal, and international law; and more.

The key to Internet research is finding the best sites in the least amount of time. This book sets forth in succinct detail the best of the best on the Internet. Whatever topic you are looking for, there is a chapter on it or tips on how to find the right sites. Far more than a book full of lists of links, the book and CD are interactive tools designed to get you to the Web pages you need by starting you off with the best advice and direction. This book offers legal links and commentary on hundreds of excellent Web sites and offers useful tips it took me years to learn on my own. The CD alone is worth the price of this book; once you put it in and start clicking on links, you will be amazed at where they take you.
